SUMMARY

Full-Stack Web Developer with a proven ability to adapt in both self-starting and collaborative environments while staying focused on achieving high-quality results under a strict deadline.
Eager to obtain a challenging position at a prestigious company that will expand my learning and builds upon my developer skills.

WORK EXPERIENCE

Full-Stack Developer Intern, Gaza Sky Geeks - *Jan.2022 - June.2022*

Over the period of **5 months,** I learned a lot of new technologies during my participation in the Code Academy. I built **more than 12 projects**, starting from the basics of the web including HTML and CSS, passing through the core of the web 'JavaScript Basics', down to the basics of the Backend and Databases 'Nodejs and PostgreSQL' and finally the top frameworks in the market such as 'React and Express', and used Jest as our testing framework to ensure our projects their viability.

I improved my social skills and was able to be an effective member of the team and overcome the problems of working within a team.

Recent Projects:

- **Quizzer:** *Demo* **-** *Code*
   A quiz-maker app, built for teachers to create quizzes and spread them to students who can attend exams, as Quizzer's main feature. Quizzer is Built with TypeScript, React, Express, PostgreSQL, and Jest (TDD).

- **E-store:** *Demo* **-** *Code*
   E-commerce website for trading electronic devices, worked with my team to develop this website through analyzing the project and distributing tasks. Reactjs has been used as the front-end library, Expressjs as the back-end framework, PostgreSQL as our Database, and Jest.

- **Reddit Clone**: *Demo* - *Code*
   A Reddit clone with user authentication using JSON web token, bcrypt, and cookies, Vanilla-JavaScript has been used for the front-end, Expressjs at the back-end, PostgreSQL as my Database, and Jest as our unit-testing framework, this was my first big-scale project to deal with, and I've learned how to plan correctly for a successful project.

CERTIFICATES

- **Google Technical Support Fundamentals Certification**
- **Python For Beginners Certification**
- **FreeCodeCamp JavaScript Algorithms and Data Structures**

SKILLS

Frontend:
TypeScript, Modern JavaScript, React, Redux, SASS, Material UI, Ant Design, Styled Components.

Backend:
Nodejs, Express, PostgreSQL, MongoDB.

UI/UX, Testing, and others:
Jest, Supertest, GitHub, Eslint, Test Driven Development (TDD), Deployment (Heroku, Netlify, GH-Pages), Agile, Scrum.

EDUCATION

July.2020 - Present **B.E in Software Engineering**, Al-Azhar University of Gaza.

July.2019 - May.2020, **High School**, Arafat Schools For gifted Students, **95.5%**
